

Possible Timeline to 2021 Lyngbya Treatments

Due to tight time constraints between completion of field sampling and requests for proposal/bids to applicators by LGWCC, it is proposed that two TAG meetings be held for 2021. The first to address recommendations to increase overall lyngbya treatment acreage and the second to address all other management related issues.

By Mid-January

- First TAG meeting is held and recommendations regarding increased acreage is presented to WCC

February

- Request for applicator proposal/bid are submitted to LGWCC
- Second TAG meeting is held to discuss treatment protocols and expanded treatment areas
- Stakeholders meeting is held

March

- March 4th: TAG recommendation for complete treatment design presented to LGWCC
- Treatments begin when water temperature exceed 64 °F (*late March – late April*)
