

## **LKG Lyngbya 2021 Treatment Sites.... March 30, 2021**

The 2021 Lyngbya Treatment Sites have been identified. Jessica Baumann has created an interactive map of the treatment areas for this year. The new applicator is Aqua Services. They have a unique system to apply the chemical treatment within 12 inches of the Lyngbya mats on the sediment bottom.

Projected application start is week of April 19<sup>th</sup> if the water temperature is high enough. Treatments will continue through September.

This map allows you to see if you are in the treatment areas or not. If not and you want treatment both Aqua Services and PLM offer the service. They should not do private treatment in the identified public treatment sites. You can find their contact information on the Lake Gaston Weed Control Site.

NOTE: To use this link you must use the “control” key and click the link. You can zoom in on areas. This map can be updated by Jessica at any time.

If you have questions please contact the information email on the website.

Thank you,

Lake Gaston Weed Control Council
